

CAPABILITY STATEMENT

GOVERNMENT & PRIME CONTRACTOR DELIVERY

CORE COMPETENCIES

LeCrown turns complex government and enterprise requirements into secure, cost-saving systems that are ready to operate. Fortune 100 companies have entrusted our key personnel to protect sensitive data, streamline critical work and deliver technology from first requirement through production and handoff. Agencies and prime contractors gain one accountable partner that can simplify the problem, build the solution and leave behind a capability their teams can sustain.

- **Cybersecurity, Zero Trust & Data Protection** — secure identity and access, least privilege, encryption, audit trails, DevSecOps and risk controls that protect sensitive information
- **IT Modernization, Integration & Cost Reduction** — automate manual work, connect legacy and cloud systems, eliminate redundant steps and measure operating savings
- **AI, Data Platforms & Responsible Innovation** — governed data foundations, MLOps, knowledge systems, lineage and human oversight that make AI useful, secure and accountable
- **Turnkey Software & Cloud Delivery** — requirements, system and software design, custom applications, APIs, infrastructure as code, testing, deployment, training and knowledge transfer

COMPANY DATA

NAICS 541512 (Primary) | 541511 | 541519 | 541611

PSC DA01 | DD01

NIGP 918-71 | 920-40 | 920-45 | 920-37

Service Area Nationwide delivery | Houston-based

Delivery Remote, hybrid and on-site | Prime or subcontractor

Credentials

Azure Data Fundamentals • Azure Databricks Platform Architect • Scrum Master Certified • B.S., University of Houston

Book & Publications

Author, HTML5 and CSS3 Responsive Web Design Cookbook (Packt) • Technical publications and OSDU contributions

COMPANY EXPERIENCE

Sysco | Fortune 100 Food Distribution (Subcontractor through Revolution Technologies, 2024-present)

Entrusted with enterprise data and AI platform delivery in a high-volume operating environment. Designed secure self-service patterns, role-based access, policy controls and auditable workflows that help teams deliver faster without weakening protection of company data.

Energy & Industrial (ExxonMobil, Shell, bp, SLB, McDermott and Oceaneering)

Served major corporations as a subcontractor through Cynet Systems, PTG, Accenture and Avanade. Simplified complex business and technical requirements, connected data and applications, and delivered cloud, software and automation improvements that reduced manual work, cost and operational risk.

DIFFERENTIATORS — DOCUMENTED DELIVERY OUTCOMES

SECURE BY DESIGN

Cybersecurity is built into access, data handling, deployment and auditability—not added after delivery. This reduces exposure and makes systems easier to govern.

CAPABILITY SEED METHOD

Start with one high-value workflow, prove it securely, document the pattern and reuse it. Each engagement leaves a repeatable capability—not a one-off prototype.

MEASURABLE EFFICIENCY

Documented engagements achieved 50% cycle and cost reduction, 30% delivery improvement, 75% process-cost savings and protected \$20M+ in program value.

COMPLEXITY MADE CLEAR

Translate cyber, data, AI and policy requirements into plain-language decisions, working software, operator guidance and accountable handoff.

TECHNOLOGY ENVIRONMENT

GCP • Azure • AWS • Databricks • Snowflake • Kubernetes • Terraform • ServiceNow • Kafka • Python • FastAPI • React

DELIVERY READINESS

Discovery • System design • MVP/Pilot • Modernization • Integration • Documentation • Production deployment • Knowledge transfer

Selected outcomes reflect documented key-personnel engagements. References and supporting detail are available for qualified opportunities. LeCrown Development is available for prime, subcontract and teaming engagements.
