

Enterprise AI, data platforms, and digital systems - built to operate.

LeCrown Development brings founder-led architecture and delivery to complex enterprise initiatives. We connect strategy, governance, cloud platforms, data, AI, and product engineering so organizations can move from intent to a secure, measurable operating capability.

25+ Years delivering enterprise technology	Houston Texas-based, globally experienced	Founder-led Senior attention from strategy through delivery	Global Distributed team leadership across the Americas, Europe, and Asia
--	---	---	--

Core capabilities

01

AI & data platforms

Governed AI enablement, MLOps, semantic data foundations, RAG and knowledge systems, model lifecycle controls, and scalable data engineering.

02

Cloud & platform engineering

Self-service provisioning, internal developer platforms, cloud modernization, Kubernetes, infrastructure as code, CI/CD, observability, and FinOps controls.

03

Enterprise architecture & governance

Operating models, solution and data architecture, identity and policy integration, metadata lineage, security-minded controls, and governance-by-engineering.

04

Custom digital systems

Web and mobile products, workflow automation, integration services, portals, IoT and digital twins, GIS workflows, and decision-support applications.

50% Cycle and cost reduction through automated data pipelines	\$20M+ Program value protected through architecture and quality governance	30% Delivery improvement through Agile and DevOps transformation	75% Cost savings from business-process automation

Industries and operating contexts

Food distribution	Energy	Industrials	Healthcare
Benefits	Research	Real estate	

What sets LeCrown apart

Strategy with implementation depth Executive framing is backed by hands-on architecture, engineering, and delivery experience.	Governance built into the platform Identity, policy, metadata, telemetry, security, and cost controls become part of how systems operate.
Enterprise scale, practical increments Work is structured into credible, testable slices that produce visible proof and reduce delivery risk.	Global delivery leadership Experience aligning distributed stakeholders and engineering teams across cultures, vendors, and time zones.

Credentials

- B.S. Economics, University of Houston
- Microsoft Azure and Azure Data certified
- Azure Databricks Platform Architect
- Scrum Master and Scrum Fundamentals certified
- MIT edX verified certificate in innovation
- Published author and OSDU contributor

Technology depth

GCP | Azure | AWS | Snowflake | Databricks | Kubernetes |
 Terraform | ServiceNow | Kafka | Python | FastAPI | React

Let's build what's next - together.
